SAFETY REGULATIONS FOR INSTALLATION AND MAINTENANCE

- Read this manual carefully before installing or maintaining the appliance. Store this manual with care for future consultation.
- All installation, assembly and non-routine maintenance must be performed exclusively by qualified technicians that are authorised by UNOX, in compliance with the regulations in force in the user country, and respecting the regulations on systems and work safety.
- Before starting installation or maintenance disconnect the appliance from any electrical connections.
- Before installing the appliance, check that the systems are compliant with the installation standards in the specific country and with the specifications indicated on the appliance serial plate.
- Interventions, alterations or modifications not expressly authorised that do not comply with the indications in this manual shall invalidate the warranty*.
- Installation or maintenance that fails to respect the indications in this manual may cause damage, injury or death.
- When the appliance is being fitted, people not involved with the installation may not pass through or occupy the work space.
- The packaging material is potentially dangerous. It must be kept out of the reach of children and animals, and correctly disposed of in compliance with local regulations.
- The rating plate provides essential technical information that is of the utmost importance for any appliance

maintenance or repairs. Do not remove, damage or modify the plate.

- Failure to follow these instructions may cause damage, injury or death; voids the warranty*; and relieves UNOX of all liability.

SAFETY REGULATIONS FOR USE

- Following procedures other than those indicated in this guide to use and clean the appliances is considered inappropriate and may cause damage, injury or fatal accidents, in addition to invalidating the warranty* and relieving UNOX of all liability.
- Children must not play with the appliance. Cleaning and maintenance to be implemented by the user must not be carried out by children without supervision.
- Children must be supervised to ensure they do not play with the appliance.
- This appliance can be used exclusively:
 - by qualified personnel that attend scheduled training courses;
 - in combination with the UNOX electrical ovens in the **BAKERLUX SHOP.Pro™** line for industrial kitchens;
 - for the aspiration and condensation of smoke evacuated via the oven flue;
 - for smoke aspiration and evacuation that exit the oven when the door is opened.
- If the appliance does not function or if there are any functional or structural alterations, disconnect the electricity and water supplies and contact a UNOX authorized customer assistance service. Do not attempt to independently repair the appliance. Request UNOX original spare parts for any repairs.

*For more information, go to www.unox.com and visit the “Warranty” section

- To ensure that the appliance is in perfect condition in terms of use and safety, maintenance and inspections should be performed yearly by an authorised support service centre.
- Never use the hood without front filters!

RISK OF FIRE!

- Before using the appliance make sure that there are no non-compliant object (instruction manuals, plastic bags or other) in the oven cavity; likewise, make sure that the smoke exhaust is free of obstructions and that no flammable materials are in the vicinity.

RISK OF ELECTRIC SHOCK

- Do not open the compartments marked with these symbols: access is reserved to qualified personnel authorised by UNOX.
- Failure to observe these regulations may cause damage, injury or death, and also invalidates the warranty*.

*For more information, go to www.unox.com and visit the “Warranty” section

HOODS

Introduction

Dear Customer,

We would like to thank you for choosing to purchase an appliance from the **BAKERLUX SHOP.Pro™** range; we hope this is just the beginning of a fruitful and long-lasting partnership.

These ovens are the climax of Unox research and guarantee minimum occupation of space with superlative performance while offering outstanding cooking management at any condition of use and load.

PICTOGRAMS

The installation and user instructions are valid for all models unless otherwise specified by the following pictograms:

EN

Danger! Situation presenting immediate danger, or a hazardous situation which could cause injury or death.

Risk of fire!

Tips and useful information

Risk of electric shock!

Earthing symbol

Read the instruction manual

Equipotential symbol

Risk of burns!

Consult other chapter

FORWARD

This appliance can be used exclusively:

- by qualified personnel that attend scheduled training courses;
- in combination with UNOX electrical ovens from the **BAKERLUX SHOP. Pro™** line for industrial kitchens (for more information, see "Table A" on page 8);
- for the aspiration and condensation of smoke evacuated via the oven flue;
- for smoke aspiration and evacuation that exit the oven when the door is opened.

We recommend you thoroughly read this manual for all instructions on how to maintain the aesthetic and functional qualities of your purchased product.

Table A

- 1 cold water supply thermally controlled by a temperature sensor
- 2 plug for connection to the electricity mains
- 3 residual water discharge
- 4 cavity moisture released from the flues of the ovens below
- 5 vapour condenser
- 6 2-speed aspiration motor
- 7 cavity moisture released from open door
- 8 exiting cold air
- 9 connecting cable between the hood and the oven

HOODS

Installation

1 UNPACKING THE APPLIANCE

Check the package for any visible damage. If damage is found, contact UNOX immediately and DO NOT install the appliance.

Before transporting the appliance to its installation point, make sure that:

- it easily passes through doorways;
- the floor supports its weight.

Transport must be exclusively performed by mechanical means (e.g. using pallet jacks).

! The packaging material is potentially dangerous. It must be kept out of the reach of children and animals, and correctly disposed of in compliance with local regulations.

NON-STOP Efforts

UNOX has followed the **NON-STOP Efforts** philosophy for years, to increase the environmental compatibility of its products and reduce energy consumption and waste.

UNOX wishes to protect the environment and invites the consumer to dispose of waste in the relevant recycling bins.

EN

2 CHECKING PACKAGE CONTENTS

Before installing the appliance, check that the following components are in the package and undamaged. Contact UNOX if any pieces are missing.

3 GETTING STARTED

REMOVING THE PROTECTIVE FILM

Slowly remove the protective films from the appliance. Clean any glue residue with appropriate solvents without using tools, abrasive detergents or acids that could spoil the surfaces.

 The film is potentially dangerous and must be kept out of the reach of children and animals, and correctly disposed of in compliance with local regulations.

3B REMOVING THE SMOKE FLUE CAPS

Remove the smoke flue caps as shown in the figure, according to the oven model the hood will be positioned on.

! Make sure that you do not mix up the smoke flue connections and the condensation outlet (OUT)

3C REMOVING THE BACK PART OF THE HOOD

Remove the back part of the hood as shown in the image.

3D FITTING THE FLUE COVER

! We recommend a flue cover be installed on top of the external end of the flue, to prevent rainwater from getting into the oven and to minimise pressure drops caused by the Venturi effect, which can occur during strong air currents.

4 POSITIONING

CHARACTERISTICS OF THE INSTALLATION AREA

Install the appliance in areas:

- dedicated and conforming to the cooking of industrial foods;
- having adequate air ventilation;
- that comply with the laws in your country;
- protected from the weather;
- with temperatures from +5°C to +35°C maximum;
- having a maximum humidity of 70%.

The appliances must only be positioned above ovens from the **BAK-ERLUX SHOP.Pro™** line and they must be fixed to them.

INSTALLATION MEASUREMENTS

Position the appliance respecting the indicated distances in the diagram and so that the back of the oven is easily accessible for appliance connections and maintenance.

⚠ Do not install the appliance near flammable or heat sensitive materials, walls or furniture. Otherwise, protect them with appropriate non-flammable materials in compliance with fire prevention regulations - see diagram below.

5 POSITIONING ON AN OVEN OR FLUE

Cooking produces hot smoke and odours that are evacuated through an exhaust pipe on the top portion of the appliance. Where multiple ovens are stacked, the bottom oven and the one/those above must be connected to the hood. To do this, you must use the extension included in the stacking kit.

3* If the oven below the hood has a hinged door*, you must remove the left-hand or right-hand plate on the hood (depending on the way the oven door opens) to make room for the hinge on the top oven.

Hinged door

Flap door

5* Tighten the clip (do not overtighten).

8* Tighten both clips fully.

CONNECTING THE FLUE OF A SECOND OVEN

EN

A second oven must be connected using the extension included in the stacking kit

For more assembly information, please see the instructions contained in the package

HOOD SMOKE EXHAUST

Smoke and odours coming from the oven cavity are evacuated through the hood smoke flues

External evacuation can be performed in 1 of 2 manners:

1) Direct evacuation in the oven installation area.

Make sure that there are no objects or materials obstructing the flue or which may be damaged by the temperature or fumes. Do not leave flammable materials near the smoke exhausts.

2) Evacuation through an efficient ventilation flue.

The UNOX smoke flue, available as an optional, must be installed.

The flue must preferably have the same diameter ($\varnothing 12\text{cm}$) throughout the entire length of the oven's exhaust pipe connection;

6 ELECTRICAL CONNECTION

 Before installing the appliance, read the “Safety regulations for installation and maintenance” section on page 4 carefully.

 Connections to the mains power and the electrical system must comply with the regulations in force in the country of installation of the appliance; and all connections must be performed by qualified personnel authorised by UNOX. Failure to comply with these regulations may cause damage or injury, invalidates the warranty and relieves UNOX of all liability.

*For more information, go to www.unox.com and visit the “Warranty” section

Before connecting the appliance to the mains electricity, always compare the power supply data with that of the appliance as specified on the rating plate.

The appliance is released from the factory with power cable and plug already connected to the terminal. Do not make any other type of electrical connection or dimensional modification to the cable other than extensions, replacing it only with one having specifications equal to the original factory cable (type of rubber, cross-section, etc.).

 The cable must be replaced by UNOX or by its technical assistance service or, in all cases, by a person in a similar role, in order to prevent any risks.

 The wiring diagrams, wire specifications and the technical data are indicated on the "Technical specifications" sheet attached to the appliance.

For proper electrical connections, the appliance must:

- Be wired into an equipotential system in accordance with current regulations. This connection must be performed between different appliances with the terminal marked with the equipotential symbol . The cable must have a maximum cross-section of 10 mm² (pursuant standard CEI EN 60335-2-42:2003-09) and be yellow/green.

- Be connected to the mains earth  (green-yellow wire).
- Be connected to a thermal differential switch in compliance with the regulations in force (0.03A, type A).
- Be connected to a main circuit-breaker that enables complete disconnection in category III over-voltage conditions.

CHECKS

- The copper jumper in the terminal board and the electrical cable must be secured together under the screw in its tightening direction, and the electrical connections must be securely tightened before connecting the appliance to the electricity mains.
- Check for any electrical dispersion between the phases and the earth, and for electrical continuity between the external casing and the mains earth.
- Check that the power supply voltage does not deviate from the nominal voltage value specified on the appliance rating plate when the appliance is operating. If this is not the case, wire the phases as specified on the "technical specifications" sheet enclosed.

7 PLUMBING CONNECTIONS

INCOMING WATER

The bottom of the appliance contains two meters of pipe with a tee for connecting to the oven water supply (including mechanical filter and fitting (3/4") with non-return valve).

A shut-off valve should be positioned between the water mains and the appliance.

❗ Use the set of new connections supplied with the appliance for the connection to the water mains. Connections that have already been used must not be used again.

❗ For additional information, please see the instructions contained inside the **BAKERLUX SHOP.Pro™** oven packaging.

Inlet water characteristics

❗ Any damage caused by using water with parameters that do not correspond to what is specified in this section is not covered by the warranty.

The water supply must:

- have a maximum temperature of 30 °C;
- be drinkable;
- be pressured at between 150 kPa and 600 kPa (200 kPa recommended).

⊕ If the pressure of the water supply at the inlet is too low (150kPa), a pump with a suitable flow rate should be used (minimum flow rate of 300 l/h). The ovens.

OUTGOING WATER

Plumbing connections are on the rear of the appliance: connect the attachment to a rigid pipe or hose by using a metal clip (supplied) and connect to a waste water discharge.

❗ UNOX recommends its own rigid pipes and flexible hoses.

❗ The waste water draining from the appliance may be hot (90°C). The pipes used for water drainage must be able to withstand high temperatures.

Drainage specifications

The drainage system must:

- be a siphon-type;
- be one meter in length maximum;
- have a minimum incline of 4%;
- have a diameter that is NOT less than the drain pipe attachment;
- be dedicated to each appliance; if this is not the case, make sure that the main drainage pipe is sized sufficiently to ensure that water flows away properly without any problems;
- be free of kinks and sharp ends.

❗ For additional information, please see the instructions contained inside your **BAKERLUX SHOP.Pro™** oven packaging.

- 1** cold water supply, thermally controlled by a temperature sensor (IN)

8

CONNECTING STACKED APPLIANCES (MAXI.Link)

All ovens of the **BAKERLUX SHOP.Pro™** line are designed to be connected to accessories (prover, hood, etc.). The accessories connect to the oven using connectors on the back of the oven, which automatically connect.

- ⊕ Follow the instructions contained in the accessory and appliance packaging for information on how to fully install and manage them.

A second oven must be connected using the cable included in the stacking kit

- Ⓢ To assemble, follow the instructions contained in the package.

Where multiple ovens are stacked, remove the pre-cut part to make room for the smoke flues from the ovens below

9 INSTALLING THE FILTERS

Make sure filters are correctly positioned during installation (the filter with slots on both sides must be placed in correspondence with the oven handle, so that the steam is aspirated as soon as the oven door is opened).

HOODS

Use

-  **Before using the appliance, carefully read the section “Safety regulations for installation and maintenance” on page 4.**
-  Clean the appliance thoroughly on first use (see chapter. “Routine maintenance” on page 32).
-  Use the appliance where the room temperature is between +5°C and +35°C.

HOW THE HOOD WORKS

The appliances do not feature a control panel because they are automatically controlled by the oven to which they are connected via cable **9**.

During cooking (manual or scheduled), the hood automatically starts at minimum speed: cold water is loaded **1** and the condensing system, **5** which reduces the fumes coming from the underlying oven flues, starts **4**.

The mitigated smoke is evacuated in liquid form via a pipe on the back of the appliance **3**.

The hood speed increases when the oven door is opened in order to aspirate frontal smoke that escapes from the oven door **7**.

- ❶ cold water supply thermally controlled by a temperature sensor
- ❷ plug for connection to the electricity mains
- ❸ residual water discharge
- ❹ cavity moisture released from the flues of the ovens below
- ❺ vapour condenser
- ❻ 2-speed aspiration motor
- ❼ cavity moisture released from open door
- ❽ exiting cold air
- ❾ connecting cable between the hood and the oven

HOODS

Maintenance

ROUTINE MAINTENANCE

! Any routine maintenance procedure must be performed:

- after disconnecting the appliance from the power and water supplies
- after having put on the proper personal protective equipment (gloves, etc.).

Do NOT clean using:

- abrasive or powder detergents;
- aggressive or corrosive detergents (e.g. hydrochloric/muriatic or sulphuric acid).
- abrasive or sharp tools (abrasive sponges, scrapers, steel bristled brushes, etc.);
- water jets.

EXTERNAL STEEL SURFACES

Wait for the surfaces to cool off.

Use a soft cleaning cloth dampened with a little soap and water only. Rinse and dry completely. Alternatively, only use detergents recommended by UNOX; other products may cause damage, thereby invalidating the warranty*. Read the usage instructions provided by the detergent producer.

*For more information, go to www.unox.com and visit the "Warranty" section

EXTERNAL FRONT FILTERS

Wait for the filters to cool off.

The front filters must be removed from time to time as shown in the figure and washed with soapy water or in the dishwasher.

Make sure that they are completely dry before re-mounting them.

 Never use the hood without the front filters.

INACTIVITY

During periods of inactivity, take the following precautions:

- disconnect the appliance from the power and water supplies;
- rub a soft cloth lightly doused with mineral oil on all stainless steel surfaces;

Before reusing the appliance:

- clean the appliance and its accessories thoroughly (see chapter "Routine maintenance" on page 32);
- connect the appliance to the power and water supplies;
- inspect the appliance;

To ensure that the appliance is in perfect condition in terms of use and safety, maintenance and inspections should be performed yearly by an authorised support service centre.

DISPOSAL

Pursuant to article 13 of Legislative Decree 49 of 2014 "Implementation of the WEEE Directive 2012/19/EU on electrical and electronic equipment waste":

The barred symbol of the rubbish bin specifies that the product was placed on the market after August 13, 2005 and that at the end of its useful life it should not be treated as other waste, but must be collected separately.

All appliances are made with recyclable metal materials (stainless steel, iron, aluminium, galvanized steel, copper, etc.) in percentages higher than 90% by weight.

Before disposal, make the appliance unusable by removing the power cable and any compartment or cavity closure device (where present).

At the end of its useful life, this product must be handled so as to reduce the negative impact on the environment and improve the efficiency of resource use by applying the principles of "the polluter pays", prevention, preparation for reuse, recycling and salvaging. Please remember that illegal or incorrect disposal of the product leads to the application of the penalties provided for by current legal provisions.

Information on disposal in Italy

In Italy, WEEE appliances must be delivered to:

- recycling centres (also known as waste disposal sites/facilities)
- the dealer from whom new appliances are purchased, who is required to collect them free of charge ("one-for-one" collection);

Information on disposal in European Union countries

The EU Directive on WEEE appliances has been implemented differently by each country. Therefore, if you want to dispose of this appliance, we recommend you contact your local authorities or dealer for information on the correct disposal method.

CERTIFICATION

EU declaration of conformity for electrical appliances

Manufacturer: UNOX S.p.A.

Address: Via Majorana, 22 - 35010 Cadoneghe, Padua, Italy

Declares, under its own responsibility, that the products

XEKHT-HCHS

XEKHT-ACHS

XEKHT-HCEU

XEKHT-ACEU

comply with the Machinery Directive 2006/42/EC through the following standards:

EN 60335-1: 2014 + A1:2014

EN 60335-2-99: 2003

EN62233: 2008

comply with the Electromagnetic Compatibility Directive 2014/30/EU through the following standards:

EN 55014-1: 2006 + A1: 2009 + A2: 2011

EN 55014-2: 1997 + A1: 2001 + A2: 2008

EN 61000-3-2: 2006 + A1: 2009 + A2: 2009

EN 61000-3-3: 2008

EN 61000-3-11: 2000

EN 61000-3-12: 2011

EN 61000-6-2: 2005

EN 61000-6-3: 2007

AFTER-SALES ASSISTANCE

In case of any malfunctions, disconnect the appliance from its power and water supply. Consult the solutions proposed in the table.

If the solution is not listed in the table, contact a technical service centre authorised by UNOX. Provide the following information:

- the date of purchase;
- the appliance data on the serial plate;
- any alarm messages that are shown on the display of the oven connected to the hood.
